

Drytac Zero is the new standard in sustainable products for the graphics, signage, and display industries. It is the comprehensive approach to providing environmentally designed products and limiting the lasting damage to our planet.

Traditionally, short-term graphics are made out of PVC, which is manufactured to last for years. However, promotions come and go, and graphics are changed out frequently. After a promotion is over, the graphic ends up in a landfill. It can take anywhere from 20 to 500 years for PVC to decompose. (WWF)

REDUCTION IN CARBON FOOTPRINT
REDUCTION IN SOLID WASTE
REDUCTION IN WATER
